Projet

Monday, February 23, 2026 3:58 PM

Ideas:

~~1) Groceries, shopping list, cart, recepies => Migros API ---> does not exist.~~

2) Bridge between Apple Music and Spotify playlists.

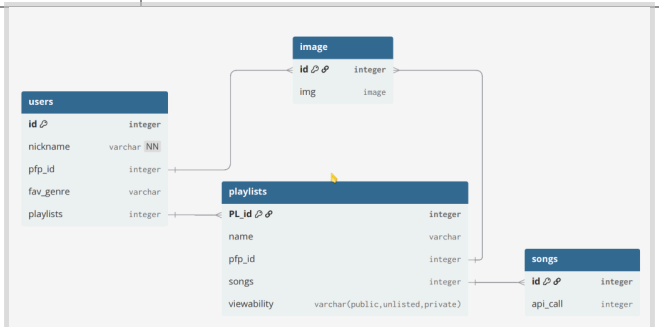
~~3) Higher or Lower based on some API, like songs streams (or total artist streams) on spotify (images, plays) ---> too simple / want to do something cooler.~~

BRIDGE BETWEEN APPLE MUSIC AND SPOTIFY PLAYLISTS

- Apple Music API (I already have an account)
- Spotify API (Have a friend who has a spare family slot)
- Create commun playlists for both platforms (bridge application)

Requierements:

- Thème libre, contraintes fonctionnelles et technologiques
Login/Logout	User accounts that have their playlists (public/unlisted/private). They can create, delete, modify them. They can view other user playlists based on the viewability. Can create links for theiry playlists as read only.
Stockage de données (base de données)	1. Accounts -> user_id, nickname, pfp, fav_genre, playlists_fk 2. Playlists -> PL_id, name, pfp, songs_fk, viewability(pub/unl/pri)



Architecture client/serveur, transport des données avec GraphQL	Viewing, modifying and adding playlists.
Accès à des données externes via une API (en principe REST)	Songs: (only songs that **are both on** apple music and Spotify can be added (otherwise not much point)) *through api gather* -> pfp, name, album, artist, genre, duration
- Frameworks et outils
Front-End: Vite.js, React, Material UI, HTML, CSS	Profiles, playlist modification and user search menus.
Back-End: Express.js, Node.js, GraphQL	Handles the interface updates, the entire DB and API calls.
Déploiement avec Netlify	For sure.
APIs	Spotify and Apple Music.
